Terebovlia, Ukraine

PROFILE

I build Python backends and AI-enabled products, from agent integrations and RAG systems to multi-service SaaS platforms. My work spans architecture, implementation and operation of production systems. I have taken freelance client work since 2023, after programming intermittently for my own business from 2013.

EXPERIENCE

LeadB AI Agentic Engineer	2026 - present
Develop backend and agentic AI systems. Product and client details are protected by NDA.	
LeadB Python Backend Developer	2025 - 2026
Built and maintained Python services and integrations for production workflows; details under NDA.	
Freelance software developer	2023 - present
Deliver client projects in AI, SaaS, civic information systems and business automation.	
Independent development	2013 - 2023
Programmed intermittently, building software for my own business.	

SELECTED WORK

Community confidential product	Case study
Develop and operate a single-tenant platform across many servers. Nearly two years on the project; its codebase exceeds 100,000 lines. Product details remain confidential.	
FastAPI, Telethon, OpenAI, OpenRouter, Elasticsearch, Playwright, ElevenLabs	
Community Ecosystem supporting applications	Case study
A separate ecosystem that supports Community: one major application with over 200,000 lines of code and many smaller companion applications. Internal workflows remain confidential.	
FastAPI, PostgreSQL, ELK, MCP integrations, S3, gspread	
Terebovlia Info AI community information portal	Case study
Built FastAPI services, a Telegram assistant and Django admin. The RAG workflow retrieves curated knowledge from Qdrant for LLM answers; a teammate developed the React frontend.	
FastAPI, aiogram, Django, PostgreSQL, Redis, Qdrant, Docker	
SUMMYZE AI email analytics SaaS	Case study
Built the FastAPI application and gateway for AI ticket analysis, chat and scheduled reports. Each client runs in an isolated Docker instance; RabbitMQ and Mailu support the email ecosystem.	
FastAPI, PostgreSQL, Docker, RabbitMQ, Mailu, JavaScript	
RRepair CRM repair-shop operations	Case study
Delivered a CRM for orders, parts inventory, technician payroll and customer communication with a Django backend and an aiogram bot interface.	
Django, aiogram, PostgreSQL, Docker	

TECHNICAL FOCUS

Backend: Python, FastAPI, Django, PostgreSQL, Redis, Docker, Linux, nginx, Git
AI and integration: LLM APIs, RAG, Qdrant, MCP, Elasticsearch, RabbitMQ, Telegram

EDUCATION

Bachelor's degree in Computer Systems and Networks	1999 - 2004
